

A photograph of a modern office interior with large windows and people working at desks. The scene is brightly lit, with reflections on the floor. A red banner is overlaid on the bottom left of the image.

# Welcome to the future of business process innovation

## Professional ARIS platform migration with Scheer

Discover new possibilities and improved functions for collaboration, dynamic publishing analytics, tables, and much more. Each new release of the ARIS platform contains new approaches and innovative methods for managing and steering your business processes and enterprise architecture.

Our experts can guide you through the successful technical upgrade and migration process of your current ARIS installation and have the necessary product expertise and experience to ensure that the process meets your particular requirements. We offer support in the following areas:

### 1. ARIS readiness assessment

The readiness assessment is the first step on the way to a new ARIS version. We don't just analyze technical questions and system prerequisites here; the readiness assessment also includes addressing all content-based, training, and rollout issues, as well as the upgrade of customer-specific solutions such as ARIS scripts, reports, dashboards, and technical interfaces.

Last but not least, we also discuss the existing content and their topicality with you. This ensures that only the content and configurations that you will continue to need in the future are migrated.

### 2. ARIS installation and migration

Before the installation, we initially identify and back up all the data, such as ARIS databases, filters, templates, dashboards, and scripts.

The next step is the installation of the requested ARIS version, together with the most complete migration of the saved data possible. Everything that you created with the previous ARIS version is aligned and migrated to the new environment, to the extent this is technically possible and sensible. This also includes user administration, connections to user directories, license management, client architectures, and interfaces.

The last step of the migration covers extensive testing and the documentation of all customer-specific installation details.

### 3. ARIS enablement

These services are based on the results of the readiness assessment and your scheduling. We offer service elements such as:

- ARIS delta workshops for experienced ARIS users
- Basic and advanced workshops for new ARIS users
- Coaching for the further transfer of knowledge during and/or after the project

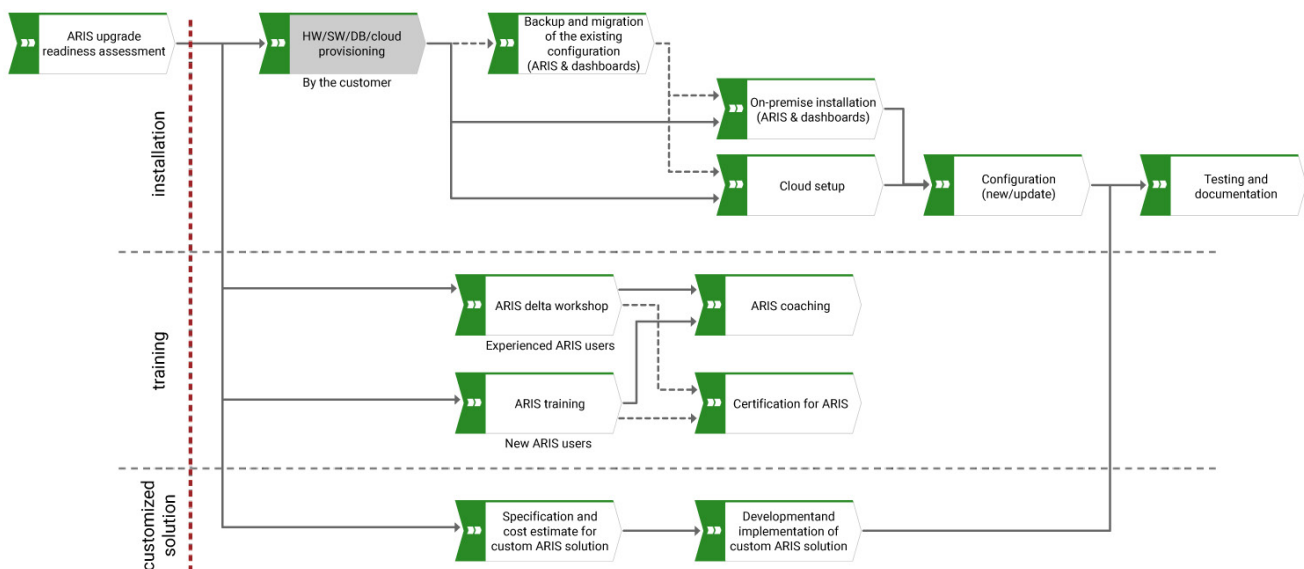

All measures are tailored specifically to your project requirements and planning.

### 4. Upgrade and migration of customer-specific ARIS solutions

ARIS landscapes often contain one or more customer-specific ARIS solutions, which can range from scripts, reports, or dashboards to complex technical interfaces.

We know how important it is to be able to maintain and continue using these custom solutions. Which is why we offer detailed analysis of your customer-specific solutions and provide specifications and cost estimates within the migration framework. We can also advise you on potential replacements of these solutions through new approaches or standard functions that are now available.

Whether you decide to upgrade or replace your customer-specific solution, we can do so in accordance with your specifications, test it, and implement it in your environment. In addition, we will produce full, exact documentation to simplify and speed up future upgrades.
